

Master Plan

Our basic plan is to create hubs and supernodes across the city so it is easy for any building to connect to our network. We think this will take about 50 tall buildings spread across all neighborhoods. We currently only have 3 supernodes and about 5 major hub nodes, so we are still a few years away from our goal.

[This is a presentation from early 2018 on the technical side of the master plan.](#) Our network has expanded a lot since this presentation and we have now connected over 200 buildings and added another major supernode.
