

Feature Flags

We use a library to control whether certain features are enabled.

To enable a feature, go to **Flag States**, create a new state, or edit the existing one, and fill it out like so.

The screenshot displays a dark-themed user interface for managing feature flags. At the top, a green notification bar states: "The flag state 'EDIT_PANORAMAS is enabled when boolean is True' was added successfully. You may edit it again below." Below this, the main section is titled "Change flag state" and shows the current configuration for the flag "EDIT_PANORAMAS is enabled when boolean is True". A "HISTORY" button is visible in the top right corner of this section. The configuration fields are: "Flag:" with a dropdown menu showing "EDIT_PANORAMAS"; "Condition name:" with a dropdown menu showing "boolean"; and "Expected value:" with a text input field containing "True". There is a "Required" checkbox which is currently unchecked, with a note below it stating "All conditions marked 'required' must be met to enable the flag". At the bottom, there are four buttons: "SAVE", "Save and add another", "Save and continue editing", and "Delete".

The feature will then be enabled.
