

Overview

This page intends to list the services "hosted" on NYC Mesh and available directly to NYC Mesh members. Some may be available only to NYC Mesh members while some may as well be available from the Internet via a Public IP address (or through Public DNS)

They are different type of services. Some are network specific or meant for devices, such as DNS or NTP, others are more people oriented such as an email server or video chat server.

If you do host a service that you would like to make available to the Mesh Community please let us know so we can add it here.

You can also discuss services on our slack channel [#mesh-services](#)

Network services

- [DNS](#)
- [NTP](#)

Public services

- [NYC Mesh Meet](#) by @Zach
- [ExcellentFiles](#) by @Eric Zhu.

It is a free file host hosted on sn3. Anyone can get 10G of free storage. It can support around ~25 users for now.

"I choose Nextcloud because it is very user friendly, and there is a nice mobile app, and desktop sync app. I have also enabled contacts + calendar sync. I use it myself coz i want to rely on other services less; to be more autonomous :)"

- [Mastodon](#) on @Daniel Heredia's server at SN3, open to all.
- [NYC Building KML Tool](#) by @Daniel Heredia, takes two address and uses NYC DCP and DOB databases to create a KML line between the rooftops to determine LoS ([code](#)).

Projects *Services that are in development...*

- [Support Bot](#) on Slack to automatically respond to [#support](#) channel inquiries
 - [Chat app](#) by [@George](#) on [slack](#)
-
